MANVIR KAUR

WEB
DEVELOPER

SUMMARY

- Over 3.5 years of experience in Frontend Developer who possess solid understanding of frontend design and development principles along with installation of different modules.
- Experience in Developing Responsive Web Applications with React.
- Understanding of responsive design concepts (media queries, designing/implementing applications geared for tablets, mobile devices, desktop browsers, etc.)
- Ability to understand the backend APIs and assist in Debugging and error handling.
- Proficient in Designing custom components for code reusability.
- Flexible enough to adapt to new environments.
- Solving complex technical problems.
- Provide technical leadership to coworkers throughout coding and project progression

SKILLS

- HTML, Javascript, SCSS, Bootstrap
- React, Redux, Typescript, React Material design,familiarity with Node and Express js

PROJECTS UNDERTAKEN

PROJECT NAME: REAL ESTATE PROJECT (CONFIDENTIAL)
Tools/Technologies: React.js,, storybook, GraphQL (basic) ,jquery, css ,Javascript
Role: Frontend Developer
Description: This is a very large web application to manage real estate dealing.We had a team of remote workers coordinating together.The components were made using storybook and I was involved in integrating those components in the React application.
Responsibilities

- Software Development lead and Module owner for assigned products/tools
- Integrated the storybook components.
- Coordinated with other developers if any component needed to be updated according to the requirements.
- Integrated apis from backend
- Work closely with the backend team to discuss the use cases and APIs.
- Source code version management using Github.
- Task assignment through Asana as a project management tool and daily task update.
- Direct interaction with the client in daily status calls, also responsible for training the new joiners on the migration activity and project setup

PROJECT NAME: HEALTH DOMAIN PROJECT

Tools/Technologies: ReactJS, Redux, CoreUI, Javascript,Css,Axios, Node Express for calling REST APIs, JWT Token

Role: Frontend Developer

Description: This is ReactJS based real time Health Domain Application. All the hospitals of one of the cities of Europe are interlinked with this application. It has different modules like General Module, Meeting Module, Role Management. These modules are further categorised into sub modules like patients, care teams, doctors meetings and many others. This application maintains the record of the patients like when and in which hospital the patient was admitted, discharged from the hospital, maintains his/ her medical and treatment history, manages meetings of doctors among themselves, ability to create care teams etc

Responsibilities

- Gathering Requirement and development of the Module
- Integrated designs on frontend using ReactJS, Redux and CoreUI
- Integrated REST APIs using Node Express
- Managed Role Management module where I have wrapped all the UI elements using single function
- Used polyfills for browser compatibility issues like Internet Explorer
- Interacted with other team members like Project Manager, Backend developers, testers for delivering the sprints on time.
- Converted all the APIs into JSON mode for offline management of the application
- Source code version management through Bitbucket
- Participated in daily scrum meetings, managed daily tasks through Jira

PROJECT NAME: POINT OF SALE APPLICATION

Tools/Technologies: ReactNative, Firebase, Firestore, material icons, Moment, react navigation

Role: Frontend Engineer

Description: This was a POS application for food orders at a particular place.The user could order various cuisines and get the generated bill.

Responsibilities

- Responsible for developing a few UI components like cuisine list ,billing page UI.
- Interaction with the senior developer on the daily scrum meetings and task update at the end of the day.
- Work with the backend team to integrate APIs

PROJECT NAME: MOMS GENIE (MOBILE APP)

Tools/Technologies: ReactNative, Axios, Google API, Twilio API, React Navigation (stack tab drawer)

Role: Frontend Developer

Description: It was a react native app for mothers to ask for expert advice for child care.They can search for different shops related to kids accessories like toys,clothes etc.They could also contact with child care specialists.It included the feature of displaying the nearest available facilities to the mothers based on their current location.The mothers could also navigate to the location using navigation through map which was integrated into the app.They could also make a call to the different vendors like shopkeepers,dance class instructors,tutors etc,

Responsibilities
- Responsible for Developing frontend design using HTML, SCSS
- Creating reusable components
- Integrating the backend APIs
- Using google map APIs for location purposes

EDUCATION

B-Tech Bachelor of Engineering in Computer Science ,
I.K Gujral Punjab Technical University - 2017
